CAMESE bulletin

IDNR-TV leads off with a panel discussion seen in Sudbury

Natural Resources Television (IDNR-TV) is Canada's first network designed to be a forum for those involved in the natural resource industries. With a license from the Canadian Radio and Telecommunications Commission, it began broadcasting to the customers of Persona Digital cable (Channel 945), which serves Northern Ontario, on October 2, 2006. I was pleased to be part of their very first live program, a panel discussion about mining in Northern Ontario and particularly Sudbury.

The panel comprised senior representatives of FNX Mining, Wallbridge Mining and First Nickel, all of which have projects in the Sudbury Basin, as well as of the Ontario Mining Association, CAMESE member Aeroquest International and Toromont. The future programming will consist of documentary, education, health and safety, info-tainment, news, business and current affairs. IDNR is very business oriented and pleased to let mining supply companies have their say.

IDNR-TV is also available via satellite, Anik F1R , downlink frequency 41.0 Mhz , 1050 Mhz. vertical , Channel 220 and expects soon to broadcast on the internet at www.idnrtv.com
